

## **Project Title: Solar-Powered Cold Storage Unit for Agricultural Produce**

### **Objective:**

To establish a solar-powered cold storage facility that supports small and medium-scale farmers by reducing post-harvest losses and improving product shelf life.

### **Description:**

The project integrates renewable energy technologies with agri-logistics infrastructure. It focuses on energy efficiency, cold chain sustainability, and access to market linkages for farmers.

### **Expected Outcome:**

Improved profitability and sustainability for farmers, reduction in food wastage, and advancement in renewable energy utilization within agricultural operations.
